System Requirements

Overview & System

The system must be a good quality stereo full range system in full working order set up by an experienced sound engineer. The desk should be situated centrally with full sightlines to the stage. We usually require a minimum of 30 minutes after set up for sound check.

Desk & FOH Outboard

The desk must be a minimum of 12 channels with four band eq with a minimum of two sweepable bands on each channel. There must be two pre-fader aux sends for monitors and two post-fader aux sends for effects. We require at least one (preferably two) good quality effects units (e.g. TC Electronic, Lexicon, Yamaha) returning in stereo through full channels on the desk. Compressors must be of good quality and fully specified (threshold, ratio, attack, release, gain makeup). If available, two 31 band graphics inserted on channels 3 (pre comp) & 4 would be nice but by no means essential! Good quality 31 band graphic eqs are required on both left and right master channels and also on both monitor sends. These must all be at FOH position. Lastly a mic at the mixing position is required for talkback purposes. Thanks!
